MARCO PIANAROLI

IT Support Specialist / IT Administrator

Berlin, Germany +49 1522 5431989 me@marcopianaroli.com marcopianaroli.com

Italian citizen, full right to work in Germany. English C2, German B1, Spanish native.

PROFILE

IT support specialist with four years running the entire IT function for a 25-person company in Berlin. Sole point of contact for endpoints, the office network and roughly 25 tickets a week across Windows, macOS and Linux, and the administrator of its Microsoft 365, Entra ID and Active Directory. I also run a self-hosted homelab on Ubuntu Server with Docker, Pi-hole and Cloudflare Tunnels, because I would rather understand what I support than relay it to a vendor.

EXPERIENCE

IT Support Specialist / IT Administrator Aug 2022 – present

Okapi GmbH, Berlin

- Sole IT contact for 25 people: laptops, printers, phones and the office network, at roughly 25 tickets a week.
- Diagnose and resolve hardware and software incidents across Windows, macOS and Linux, on site and remotely.
- Administer Microsoft 365, Entra ID and Active Directory: accounts, groups, access permissions and device onboarding.
- Own system updates and security patching across the device fleet, and the asset inventory behind it.
- Built internal scripts and automations that removed repeat tickets from the queue.
- Also carry the webmaster work: front-end changes, SEO, updates and maintenance.

IT Support, 1st level Aug 2019 – Oct 2020

Compañía Urbana, Buenos Aires

- Full incident lifecycle in ServiceDesk Plus, from intake and triage to resolution and escalation, to SLA.
- Remote and on-site end-user support with TeamViewer and AnyDesk.
- Administered user accounts and access permissions in the Microsoft 365 ecosystem (Teams, Outlook).
- Component-level hardware repair: RAM, disks, power supplies.

Administrative Assistant / Help Desk Oct 2016 – Oct 2018

Cencosud, Buenos Aires

- Help desk support and technical onboarding for new employees.
- Data entry and administrative systems supporting company-wide operations.

HOMELAB

- Self-hosted on Ubuntu Server, on a laptop that stopped being fast enough for anything else. Up 214 days.
- Four Docker services with restart policies and named volumes: Pi-hole for DNS filtering, PocketBase for databases, Grafana for monitoring, cloudflared for ingress.
- Published through Cloudflare Tunnels instead of port forwarding, so nothing on the router is exposed.
- Grafana watches the server and a desktop host; Pi-hole runs 13 regex rules across three blocklists.

SKILLS

Microsoft & identity	Microsoft 365 (Teams, Outlook, Exchange), Entra ID, Active Directory
Systems	Windows, macOS, Linux (Ubuntu, Debian), hardware repair and build
Containers & servers	Docker, Docker Compose, volumes and restart policies, Ubuntu Server
